

HARM

Wachau, Austria

Maria Harm and her husband Andreas started in 2010 with some prime vineyards in the Wachau, Durnsteiner Hollerin and Kellerberg and the Wachtberg vineyard in the Kremstal. The wines impressed us immediately for their transparency of terroir and the obvious focus on balance over power. The Harm wines have lighter alcohol and at the same time, do not compromise on ripe fruit. Each wine carries its village and vineyard name, but because the winery itself is located outside of the Wachau (just over the border in the Kremstal), the winery cannot be a part of the Vinea Wachau, and so they do not use the designations of Steinfeder, Federspiel, or Smaragd. For them, it also does not make sense to wait to pick because you want to make a Smaragd wine and need a certain level of alcohol, again the primary goal is the expression of terroir and elegance.

Harm has ten hectares of vines, nearly evenly split between the Kremstal and the Wachau. Looking out over the vineyards from a very steep hillside on the Danube, Maria described the Wachau as “a paradise lost.” It’s normal in the Wachau to see bare ground or dry, herbicide-treated grass in most of the vineyards. In the Harm vineyards, you see a lot of bright green grass, wild flowers, and vibrant, healthy vines. As far as treatments go, they are using low amounts of copper sulfate and various plant extracts (in 2017, they followed biodynamic principles and are certified by Demeter in 2019). In one vineyard in the Kremstal they have planted a vegetable garden with different heirloom tomato varieties, cucumbers, peppers, herbs and garlic. In the Wachau, Maria and Andreas have apricot and peach trees as well as almond trees between the Riesling vines. “For us”, Maria said, “organic viticulture is the understanding of processes in the vineyard’s ecosystem and interaction with these natural circumstances. Andreas’ knowledge (PhD in organic agriculture) as an oeno-scientist and consultant in organic viticulture are an indispensable instrument in this context. In his view, the vineyards are biospheres, which must be protected and supported. Through our work we can observe the return of endangered species, such as the bee-eater [a bird that’s been adversely affected by commercial farming].” It’s the same with newly-acquired old vineyards, which must carefully be re-cultivated to preserve the enormous potential of the old vines.

Minimalism is the obvious concept in the cellar. During the harvest, a fastidious selection of the grapes guarantees perfect initial conditions for spontaneous fermentation which can last from three weeks to eight months. The pressed grapes “go their way”; during the fermentation, they are very patient and they trust in the energy of their grapes and natural yeasts. A very long yeast contact is important for the character of the Harm wines, and they are mainly bottled after at least one-year aging period in the tanks or wooden barrels. Andreas Harm explained to us that because the fermentations last so long, the wines can be quite shy when they are first bottled and really express their terroir best after having some time in the bottle. In that vain, there is not a rush to have the freshest, youngest vintage as is often the case for Austrian wine.

It’s tremendous to find such an exciting winery that has remained relatively unknown. The wines have a great complexity and a purity of terroir, emphasizing elegance over power.

Manchmal möchte man es eben unkompliziert leicht haben. So wie Fio, der Wirtshaushund. Das Weingut Harm hat seinen Sitz nämlich in einer **ehemaligen Gastwirtschaft**. Und **FIO** gehört einfach dazu. Genau beobachtet er, wann die Trauben für seinen Wein reif sind. Vier Lagen hat er sich dafür ausgesucht. Eine besser als die andere. Mit Fio ist es immer spritzig und fröhlich. Wie ein vergnüglicher Spaziergang durch die Weingärten. Und wer kommt jetzt mit?

Grüner Veltliner FIO “Wachau” 2018

6/750ml

F.I.O. stands for four-in-one, a reference to the four vineyards that are blended to make this Wachau Grüner Veltliner and it also happens to be the name of the family dog. The vines are ten to 30 years-old and come from the right bank of the Danube with mainly sandy loess soils. The 2018 was harvested in late August. Fermentation lasted for seven weeks (no added yeasts) in stainless steel; aged in stainless steel on the fine lees until a gentle filtration before bottling. The ABV is a refreshing 12% and the wine is bursting with juicy yellow fruits - nectarine, mirabelle plums - succulent!

Technical Specifications

Product Type: White Wine

Varietal: Grüner Veltliner

Farming Type: Organic
